

Test	Test for Specified Micro-Organisms (European Pharmacopoeia)
MCS Test Reference	TMPH6 Note: This test is often performed together with a Total Viable Count test (ref. TMPH5).
Target Organisms	Staphylococcus aureus Pseudomonas aeruginosa E coli Salmonella species Bile Tolerant Gram Negative Bacteria (BTGNB)* * Previous pharmacopoeia described these as Enterobacteria
Quantity of test sample required	50g
Total Test Time	5 days
Information Required	1) If yours is a licensed product we will require a microbiological specification for the product and a statement as to whether or not method validation is required. 2) The address and company details of the sender, the sample name / reference and the tests required (e.g. TMPH6) including which target organisms are required.
Send to	MCS Units 8 & 9 Rock Mill Business Park The Dale Stoney Middleton S32 4TF Testing is normally commenced on the day that the samples are received.
Reporting	Written reports are provided on completion of the test. These can be sent as a paper copy, email or fax as you require. These results will be given as 'Present' / 'Not detected' for the target organisms. An early warning by telephone or email is given if a product is failing to meet its specification prior to the completion of the test.
